AIM:

To develop an Android application that changes the font and color of text and displays a toast message on button click.

ALGORITHM:

- Open Android Studio and create a new project.
- Design the layout using TextView and Button controls in XML.
- Initialize UI components in MainActivity.java.
- Implement OnClickListener for buttons.
- Change font using setTypeface() and color using setTextColor().
- Display toast message using Toast.makeText().
- Run the application on an emulator or device.

CODE:

XML:

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:orientation="vertical"
    android:gravity="center"
    android:layout_width="match_parent"
    android:layout_height="match_parent">
```

```
<TextView
    android:id="@+id/textView"
    android:text="Hello World"
    android:textSize="24sp"
    android:textStyle="normal"
    android:layout_margin="20dp"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"/>
```

```
<Button
    android:id="@+id/btnFont"
    android:text="Change Font"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"/>
```

```
<Button
    android:id="@+id/btnColor"
    android:text="Change Color"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"/>
```

```
<Button
    android:id="@+id/btnToast"
    android:text="Show Toast"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"/>
```

```
</LinearLayout>
```

MainActivity.java:

```
package com.example.fontcolorapp;
```

```
import androidx.appcompat.app.AppCompatActivity;
import android.graphics.Color;
import android.graphics.Typeface;
import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.TextView;
import android.widget.Toast;
```

```
public class MainActivity extends AppCompatActivity {
```

```
    TextView textView;
    Button btnFont, btnColor, btnToast;
    boolean isBold = false;
```

```
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
```

```
        textView = findViewById(R.id.textView);
        btnFont = findViewById(R.id.btnFont);
        btnColor = findViewById(R.id.btnColor);
        btnToast = findViewById(R.id.btnToast);
```

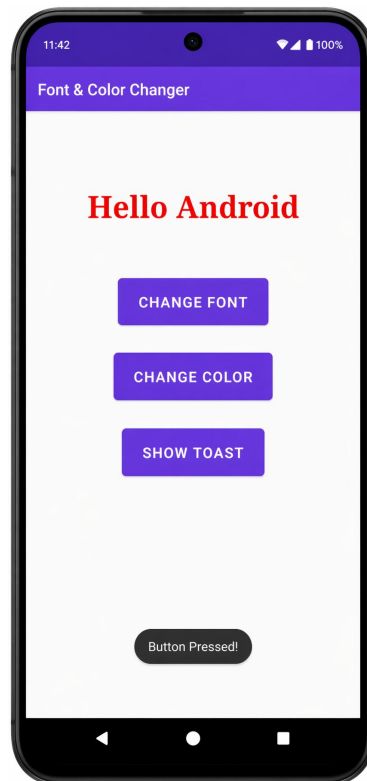

```
        // Change Font
        btnFont.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
                if (isBold) {
                    textView.setTypeface(null, Typeface.NORMAL);
                } else {
                    textView.setTypeface(null, Typeface.BOLD);
                }
                isBold = !isBold;
            }
        });
```

```
        // Change Color
        btnColor.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
```

```
        textView.setTextColor(Color.RED);
    }
}

// Show Toast
btnToast.setOnClickListener(new View.OnClickListener() {
    @Override
    public void onClick(View v) {
        Toast.makeText(MainActivity.this, "Button Pressed!", Toast.LENGTH_SHORT).show();
    }
});
}
```

OUTPUT:

RESULT:

The application successfully changes the font and color of the text and displays a toast message when the button is pressed.
