AIM:

To write JavaScript code to validate user input in a registration form. The validation will ensure that the data entered by the user meets specific criteria for each field. This will help in maintaining data integrity and prevent invalid submissions.

ALGORITHM:

1. **Start**
2. Get the values of all fields from the registration form:
 - First Name
 - Password
 - Email
 - Mobile Number
 - Address
3. **Validate First Name**
 - Check if it contains only alphabets.
 - Check if the length is **≥ 6 characters**.
 - If not valid, show an error message and stop.
4. **Validate Password**
 - Check if the length is **≥ 6 characters**.
 - If not valid, show an error message and stop.
5. **Validate Email**
 - Check if it matches the standard pattern **name@domain.com**
 - If not valid, show an error message and stop.
6. **Validate Mobile Number**
 - Check if it contains only digits.
 - Check if the length is exactly **10 digits**.
 - If not valid, show an error message and stop.
7. **Validate Last Name**
 - Check if it is not empty.
 - If empty, show an error message and stop.
8. **Validate Address**
 - Check if it is not empty.
 - If empty, show an error message and stop.
9. If all fields are valid:
 - Display message: **“Form Submitted Successfully!”**
10. **End**

CODE:

HTML code:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>ORRS Registration</title>
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <link rel="icon" type="image/webp" href="logo.webp">
  <link rel="stylesheet" href="styles.css">
